

WEEKLY LOGS

24 Apr 2026

Week 13

1. Performed extensive system testing to validate functionality and stability. Tested queue processing,
2. Redis caching behavior, S3 integration, and AI image generation under different scenarios.
3. Identified bugs related to invalid inputs and API failures and fixed them.
4. Verified correct handling of edge cases and fallback scenarios.
5. Conducted end-to-end testing from request submission to image generation output.
6. Improved error handling mechanisms to ensure system reliability.
7. Ensured that all modules are working seamlessly together without failures.
