

WEEKLY LOGS

1 May 2026

Week 14

1. Prepared the system for deployment and demonstration.
2. Configured Docker environment to containerise the application and ensure a consistent setup.
3. Verified that Redis, worker service, and other components run correctly within containers.
4. Managed environment variables and configuration files for deployment readiness.
5. Conducted testing in a containerised setup to ensure no environment-related issues occur.
6. Validated system startup, execution, and shutdown processes.
7. Ensured that the application is stable and ready for demonstration.
