

WEEKLY LOGS

3 Apr 2026

Week 10

1. Worked on strengthening system reliability through advanced error handling and monitoring mechanisms.
2. Implemented comprehensive try-catch blocks and fallback strategies for handling failures in image generation, S3 operations, and queue processing.
3. Improved logging system to include detailed error messages and execution flow tracking.
4. Finalised monitoring setup using logs and status consumers to ensure visibility into system operations.
5. Conducted extensive end-to-end testing covering normal, edge, and failure scenarios.
6. Fixed bugs identified during testing and ensured consistent output generation.
7. Validated that the system behaves correctly under different input conditions and failure cases.
