

WEEKLY LOGS

17 Apr 2026

Week 12

1. Focused on experimental analysis and performance evaluation of the system.
2. Conducted multiple test runs to collect data on processing time, response latency, and success rates.
3. Compared system performance with and without caching to demonstrate efficiency improvements.
4. Prepared structured tables and summarised observations for better clarity.
5. Created graphs and visual representations to highlight trends and system behaviour.
6. Validated results against project objectives to ensure alignment with expected outcomes.
7. Refined experimental findings and integrated them into the documentation.
